DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 03/22/06. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 8, 19, 28 rejected under 35 U.S.C. 102(b) as being anticipated by Gedcke et al. (U.S. Patent No. 5,995,989).
4. With respect to claims 1, 28, Gedcke et al. disclose a method and apparatus for compression and filtering of data associated with spectrometry that includes reading data corresponding to a spectrum (see e.g. col. 8, lines 56-59); carrying out a statistical analysis of noise within the read data to obtain at least one statistical moment or parameter related to the distribution of the noise (see e.g. col. 10, lines 54-58); determining a threshold value from the at least one, obtained statistical moment or parameters (see e.g. col. 10, lines 55-58); identifying peaks in the spectrum by comparison of the data points in the spectrum to the said threshold value (see e.g. abstract); and storing information related to the identified peaks along with the at least one obtained statistical moment or parameters (see e.g. col. 3, lines 12-30).

5. With respect to claims 2-5, 8, Gedcke et al. disclose the invention as claimed including the step of storing the information related to the identified peak comprises storing the data points of the peaks and discarding the noise data (see e.g. col. 10, lines 62-64); generating a mass spectrum subsequent to the step of storage (see e.g. col. 1, lines 11-17); comprising displaying the mass spectrum (see e.g. Fig. 6); the step of displaying comprises displaying only the identified peaks without also displaying the noise in the read data (see e.g. col. 7, lines 8-16); at least one statistical moment or parameter is selected from the list comprising an expectation value, a standard deviation, and a variance (see e.g. col. 4, lines 61-67);

6. With respect to claim 19, Gedcke et al. disclose the invention as claimed including reading data corresponding to a spectrum (see e.g. col. 8, lines 56-59); dividing the received data into at least two blocks (see e.g. col. 3, lines 35-39); carrying out a statistical analysis on a first of the at least two blocks, of noise within read data within that block, to obtain at least one statistical moment or parameter relating to the distribution of the noise in that block (see e.g. col. 3, lines 38-39 and col. 8, lines 4-15); determining a threshold value from the, at least one, statistical moment or parameters obtained in respect of the noise within that block (see e.g. col. 10, lines 55-58); identifying peaks in that block of the spectrum, by comparison of the data points in that block of the spectrum to the said threshold value determined for that block (see e.g. abstract); and storing information related to the identified peaks in that block, along with the obtained at least one statistical moment or parameters for that block (see e.g. col. 3, lines 12-30).
